WORK EXPERIENCE

Big Bear Vans

3D Modeler & Rendering Artist

Jan 2025 - Present

- **Precision Modeling:** Design custom campervans interiors based on exact dimensional specs (fixed length/width) for manufacturing.
- **Rendering:** Author PBR materials and cinematic lighting to produce high-end renders for visualization.
- **Iterative Design:** Refine complex 3D assets based on client and build-team feedback to ensure 100% technical accuracy.

Ace Games Studio

3D Modeler & Assets Specialist

Feb 2025 - Dec 2025

- **Asset Pipeline Management:** Managed the full production of low-poly environment props and mechanical assets, focusing on high-to-low poly baking and seamless engine integration.
- **Character Animation & Rigging:** Developed character animations and custom rigs for PC/mobile platforms, ensuring natural deformations.
- **Technical Optimization:** Engineered optimized meshes and UV layouts to maximize texel density and performance while maintaining high visual quality in real-time engines.

EDUCATION

Govt. Graduate College for Boys Satellite Town Gujranwala

Bachelor of Chemistry

15 Nov 2022 - 27 Dec 2024

PROJECTS

1. The "3-in-1" Industrial Utility Machine Animation [🔗](#)

- **Inspiration:** Modeled after the "Zack D. Films" style of educational and mechanical storytelling.
- **Character Interaction:** Explored tactile realism through character-to-machine hand-keying and movements.
- **VFX Study:** Implemented custom particle systems for friction-based sparks and vacuum suction physics.
- **Technical Optimization:** Focused on scene optimization and asset management for high-fidelity rendering.
- **Explanatory Storytelling:** Designed a "functional" narrative to clearly demonstrate a 3-in-1 utility machine.

2. Cozy Bedroom Diorama: Lighting & Mood Study [🔗](#)

- **Full-Pipeline Production:** Engineered a stylized isometric environment from high-fidelity modeling in Blender to final engine-ready optimization.
- **Cinematic Lighting:** Mastered "warm and cool" contrast techniques to create a calm atmosphere and enhance visual depth through lighting.
- **PBR & Optimization:** Authored custom textures and optimized UV layouts to ensure high-quality material definition within strict performance standards.

3. The Aether-Dock Air-Station (Punk Island) [🔗](#)

- Engineered a complex environment asset featuring multiple intersecting sub-models including an airship, docking platform, and industrial machinery.
- Managed a unified stylized aesthetic across diverse materials like weathered wood, aged copper, and fabric balloons using Blender.
- Optimized the multi-component assembly for real-time performance, ensuring clean edge flow and efficient mesh intersections.

SKILLS

- **3D Modeling:** Expert in high-to-low poly workflows, hard-surface mechanical design, and clean retopology for real-time engines.
- **Texturing & UVs:** Advanced PBR material authoring in Substance Painter with strategic UV packing to maximize texel density.
- **Animation & Rigging:** Skilled in Character and mechanical rigging with a focus on character movement and object interactions.
- **Software Stack:** Proficiency in Blender, Adobe Photoshop, Substance Painter and Autodesk Maya.
