

Adam Watts

3D Environment Artist & Generalist Designer

Mid-level generalist artist with nearly 6 years of professional experience creating 3D environments, UI/UX, 2D animation, and game-ready assets across healthcare, education, and games. Skilled in world-building, modelling, texturing, and Unity implementation, with strong design and UX capabilities. Experienced in working within Agile, cross-functional teams, collaborating closely with developers, researchers, and stakeholders. Winner of the Technology Advancement Award (2025) for Amblios Club.

EDUCATION

University of SouthamptonWinchester, England
GAME DESIGN & ART – Bachelors Degree BA First Class Honours Degree

Ux Design Institute – credit-rated by Glasgow Caledonian UniversityRemote
Level 5 (RQF) Professional Diploma in UX Design – Overall grade of 93%

WORK EXPERIENCE

DESIGNER & GAME ARTIST – NUCLEOLUS SOFTWARE LTDMarch 2020 – Present

- Project Lead of The Amblios Club, a mobile healthcare application for children’s eye care. The project has featured in multiple news sources including The Independent and BBC South, and recently won the “Technology Advancement Award in 2025, presented by Central South Business Awards.
- Lead Designer and Artist on numerous projects, covering everything from user research, design documents, Figma prototypes, to both 2D and 3D game asset creation, animations and marketing material.
- Made game ready smart-objects in Photoshop; implementing them in Unity with RectTransform for responsive UI.
- Designed polished, developer-ready UI components and responsive layouts using Figma.
- Held an active role in leadership, shaping the company by participating in financing discussions and the approval of new projects and opportunities, along with the creation of pitch decks, management of project scope, maintenance of brand consistency, as well as being placed in charge of multiple innovative projects requiring client facing responsibilities and stakeholder management.
- Collaborated with developers and stakeholders to ensure implementation quality and handle edge cases with solutions, and co-led stakeholder and design workshops to guide project direction.
- Created annotated wireframes and user journey maps.

CONSULTANT GAME DESIGNER & ARTIST – UNIVERSITY OF SOUTHAMPTONFebruary 2021 – December 2023

- Worked as a Lead Designer and Artist for a variety of educational projects in association with multiple teaching fellows at the University of Southampton. A recent collaboration with the Psychology Faculty led to the creation of a game which incorporated education game mechanics, that encourages user-centred learning, with the purpose of supporting young people to develop social and career skills. This also involved co-presenting the project and its research at the GALA (Games and Learning Alliance) conference in Dublin, November 2023.
- Hosted multiple user-testing events across Southampton and the Isle of Wight to garner user input and feedback to support the development of functional, visually engaging projects.

SKILLS & SOFTWARE

3D Art & Environments: High-mid poly modelling, Low-poly optimisation, World-building, Level assembly, Set dressing, UV unwrapping, LOD creation, Vertex painting, PBR texturing, Baking workflows, Lighting setup in Unity, Post-processing shader use, Decals, Trim sheets,

Tech & Pipeline: Blender, Adobe After Effects, Unity Engine Implementation (assembly, lighting, UI animation, materials, scene setup), , Adobe Photoshop, Procreate, Krita, Figma, Git, Miro, Trello, Microsoft Suite

UI/UX Design Skills: Wireframing, Prototyping (low-high fidelity), Interaction design, user Journey mapping, Information architecture, User testing, Motion graphics, 2D asset creation, Marketing, Design Systems, Responsive design, Cross-platform UI

Soft Skills: Cross-functional collaboration, Stakeholder communication, Public speaking, Documentation & presentation, Product Thinking, Researched-informed design. .

ACHIEVEMENTS

TECHNOLOGY ADVANCEMENT AWARD WINNER – 2025

- Awarded to Nucleolus Software by Central South Business Awards, recognising the development of Amblios Club, an innovative software solution for children with Amblyopia.
- Focusing specifically on the development of novel AI-based techniques for real-time monitoring of eyepatch usage on mobile devices, ensuring high accuracy on modest hardware, including older smartphones, and its application alongside gamified incentives.

PUBLISHED ACADEMIC – 29th November 2023

- Whilst working as a Game Designer and artist on a project for the Psychology Faculty at the University of Southampton, I collaborated and co-authored a paper titled: “Balancing inequalities: a board game for young people from coastal communities to discuss plausible futures”, I later presented this paper at the GALA (Games and Learning Alliance) Conference in Dublin November 2023. I am currently working towards getting a second paper published which should occur in the following months.

RECENT PROJECTS

The Amblios Club – UX/UI Designer & Game Artist
Funded by NIHR i4i, Innovate UK, and University of Southampton | 2022–Ongoing
A healthcare companion app with gamified incentives supporting children undergoing patching therapy.

- Led visual direction + art bible creation
- Produced all 2D game art & animations
- Designed UI/UX flows, wireframes, and prototypes in Figma
- Worked with clinicians, families, and researchers through iterative testing
- Created marketing assets, motion graphics, and Unity-ready components
- Contributed to minigame design and implementation

Bright Sight – Game Designer & 3D Artist
Collaboration with University of Southampton & Gift of Sight in a multidisciplinary team | 2024–Ongoing
A research-based game developed to assess visual processing speeds in children with Nystagmus.

- Modelled and textured full scene + interactable objects
- Built lighting scenarios to test visibility under varied conditions
- Contributed to user testing and research-aligned game mechanics
- Created 2D/3D animations and Unity-ready assets
- Worked with researchers to align gameplay with user testing and measurement goals.

Hex – 3D Environment Artist & Game Artist
Nucleolus Software – 2025 – Ongoing
A game inspired by tabletop role playing games.

- Environment modelling, level assembly, set dressing
- Texturing, vertex painting, and lighting in Unity
- Scene optimisation, LODs, and asset preparation
- Implemented assets, fog settings, skybox adjustments (Flatkit), and post-processing
- Supported UI creation and 2D asset work
