

[INTRO]

I best enjoy working in an active team, I focus on my tasks and always strive to complete all work set before me, no matter the time it may take. I do just as well working on my own, which has been tested on my previous projects where I was assigned a set deadline to work towards, plan my upcoming weeks and best spread the workload to complete my projects. I believe in the responsibility of always completing what I have started. On top of this I am an optimistic, hard working and team driven individual.

Most of my current experience is in the industry of computer games and CGI. Despite that my experience and many of my skills are transferable. I can also work in Photoshop on 2D graphics, layouts for leaflets or other 2D works and prepare tasks for other team members. I've worked in numerous teams on various scales of projects to build game ready levels and have communicated my ideas during very large meetings to various departments. I am good at explaining and communicating with others which is essential in many places of work that I've been to. This is why I was given responsibility to train and guide newer team members and train them on new software or workflows we used. This is greatly supported with my fluent knowledge of the English language and constant willingness to help whoever I can to best deliver our work.

Now with my experience as a game and graphics artist, I continue my growth and aim to tell my own stories, and build my own worlds with the modern tools. Additionally I am keen to learn new skills, I am not fearful of trying something new and I am keen to develop my skill further in other industries..

[EXPERIENCE]

Gunzilla Games ([website](#)) - *3D Environment Artist (UK Remote)*

JULY, 2023 - MAY, 2025

Remote work for a Frankfurt based studio. My responsibilities included creating level art and a few assets based on concepts and design block outs. I mostly used an existing asset library. I made a couple custom large assets such as buildings, towers or smaller props. Anything more than that was sent off and requested from outsource studios. The work here revolved around efficient use of assets and sometimes finding ways to reuse what we have, as due to the large scale of the map requesting custom assets and kits was not always an option. I communicated with my team, the team lead and members of the design team on a weekly basis to receive feedback and help shape many of my exterior and interior spaces.. Additionally there were junior artists who I had helped with some of the initial tasks, and I guided them on how things needed to be done in this project.

The Chinese Room ([website](#)) - *3D Environment Artist (Brighton, UK)*

JUNE, 2022 - MAY, 2023

Remote work on Vampire The Masquerade Bloodlines 2. My initial work involved level art passes, bringing block-outs of levels and small diorama areas to a 1st Art Pass. It was generally to narrate a specific story or purpose of such an environment. I then followed by adding my lighting pass, as a suggestion, highlighting key areas or player paths. Additionally I moved to working in small teams to plan out further areas/unique props needed for the project.

nDreams ([website](#)) - *Junior 3D Environment Artist (Farnborough, UK)*

MARCH, 2021 - MAY, 2022

When I joined, I started on the VR game Fracked. Then moved onto the now announced Ghostbusters VR game. I worked in close contact with my lead and members of the small teams responsible for different missions/levels of the games. Sticking to smaller teams allowed for better communication. It was easier to pinpoint each member, when I needed to find out particular info on an area I worked on. It helped me work more optimally too, as I always saw all the updates to the workflow for props and levels etc. Both projects were developed in a stylised art style.

ADAM TOPÓR

3D / ENVIRONMENT ARTIST

[MAIN TOOLS]

- Substance Painter
- Unreal Engine 5
- Photoshop
- Blender
- 3DS Max
- Maya
- Zbrush

[SECONDARY TOOLS]

- Marmoset Toolbag
- Topogun
- Speedtree

[PRODUCTION TOOLS]

- Perforce P4V
- JIRA
- Trello
- HackNPlan
- Miro

PolyAmorous Games ([website](#)) — 3D / Environment Artist (Warsaw, Poland)

APRIL 2018 - SEPT 2020

I worked closely with the Art Director, Level Designers and Animators to create many 3D assets, and levels for the Paradise Lost game. I created both types of models; organic and hard surface. I learned how to prepare certain models for rigging and animation. Shared tips and exchanged knowledge with fellow 3D Artists in my team. This helped me push my assets to the best quality possible within our project's tight time constraints. Being part of such a small studio meant I was fairly cross-disciplined; whether it was to aid with level design, level block-out, 2D visuals or basic storyboarding of some aspects of Paradise Lost. I have helped numerous times in these areas. All my main work I have implemented into the project myself.

[PROJECTS]

Ghostbusters: Rise of the Ghost Lord (VR) (TBA) ([Oculus link](#))

For this VR title, I was initially involved in establishing (with my team) the best workflow to create props with a consistent art style. Then I moved onto modeling various types of props for environments and building the game's levels based on blockouts. Certain props involved more work and detail, as they were interactable, or in the main player space etc. VR hardware constraints also meant that I had to limit where I put detail in my models.

Fracked (VR) (2021) ([PlayStation Store link](#))

A VR title for the Playstation 4. I joined later on in the development and mainly reworked areas of certain levels to improve their focus, readability and optimisation. I was also involved in modeling/fixing props, worked closely with the art director and other artists to establish best ways to improve, and finalise many of the game's levels.

Paradise Lost (2021) ([Steam link](#))

It's a first-person, story driven, adventure game in an alternative post WWII universe. A different ending to the war led to a different life for everyone. I worked on this game during my time at PolyAmorous, plus provided some additional materials for marketing. Such as a detailed, stylised sculpt of a tree, a central asset for use in one of the game's teasers.

[EDUCATION]

De Montfort University, Leicester — Game Art Design BA (Hons)

SEPT. 2014 - MAY 2017

Several of my projects involved working in teams of 6, which was a great time for me to learn and develop my team communication, and find ways of dividing the workload amongst each member. This enabled for a better use of each person's skill-set and to prioritise efficiency. All tutors and some of my colleagues had previous experience from the game's industry and shared many valuable skills with everyone. This support and everyone's effort was what helped me push my skills to where they are now. Additionally, a 3D diorama I made during this time, has been featured on IAMAG's website as part of a monthly selection of best models. It's inspired by the Dark Souls series and called Entwined Gate ([LINK](#)).

Regional College, Peterborough — National Diploma Art & Design (Level 3)

SEPT. 2012 - JUNE 2014

My first education with a large focus on Art and Design, which helped me learn various skills and develop an eye for colour/composition. It was mostly focused on traditional art forms, such as painting and sculpture. There were some subjects and projects where I had

[LANGUAGES]

- English (Fluent)
- Polish (Native)
- Japanese (Learning)

[INTERESTS]

- Retro games and retro remakes in particular, such as Quake 2 and Half-Life.
- RPGs and adventure games like Dark Souls and The Elder Scrolls Skyrim.
- Modern story driven games, such as Life is Strange, and especially VR titles like Half-Life Alyx.
- Urban Sketching, painting and life drawing.
- Physical activities like Airsoft, bodybuilding,

worked digitally on some fonts, illustrations and 3d modeling.. It greatly helped me prepare for my University degree.

swimming and cycling.
