

//LIAM SELL

SENIOR REAL-TIME GENERALIST

TECHNICAL 3D ARTIST // PIPELINE OPTIMISATION

Manchester // liamsell@gmail.com // 07593400782 // liamsell.artstation.com

[PROFILE]

Senior Real-Time Generalist with 8+ years of experience building immersive environments and high-performance assets for Games, VR, and Enterprise Simulations. A proven technical owner capable of managing the full production pipeline, from modular environment architecture and PBR look-dev to custom node-based shaders and engine optimisation. Expert at delivering high-fidelity visual storytelling while maintaining strict frame-rate budgets across Unity and Unreal Engine.

[SKILLS & TOOLS]

Artistic Workflows: High-to-Low Poly Modelling, PBR Look-Dev, Photogrammetry, Modular Environment Architecture, Atlas-based Texturing, Retopology.

Technical Art: Node-based Shader Development (Unity/Unreal), Performance Profiling, CAD-to-Poly Optimisation, Lighting & Post-Processing, LOD Orchestration.

Engines and Platforms: Unity (URP/HDRP), Unreal Engine, PC, Mobile, VR/AR, WebGL.

Software Suite: Blender, 3ds Max, Substance Painter, Substance Designer, Plasticity, Adobe Creative Cloud.

Additional: Audio Production (Reaper), 3D Printing (Physical Output & Modelling Constraints).

[EXPERIENCE]

Lead 3D Generalist, Bloktopia NOV 2022 - OCT 2025

- **Technical Art Leadership:** Acted as the primary technical owner for the 3D pipeline; defined the modular workflows and engine integration standards required for large-scale, persistent environments.
- **Pipeline Architecture:** Engineered modular environment kits and atlas-based texturing workflows in Unity, maintaining high-fidelity visuals while meeting strict real-time performance targets.
- **Strategic Collaboration:** Acted as the key bridge between company leadership and the development team to translate high-level requirements into fully optimised, build-ready visual assets.

3d Artist, Pixelmill SEPT 2019 - OCT 2022

- **Industrial Simulation:** Owned the full 3D content cycle for high-stakes VR/AR training and visualisation projects, translating complex engineering requirements into high-fidelity interactive experiences.
- **Performance Optimisation:** Developed and implemented CAD-to-Realtime optimisation workflows, consistently achieving framerate stability for VR applications on PC and mobile HMDs.
- **Technical Communication:** Acted as the primary link between client visual requirements and the programming team, establishing asset standards and shader benchmarks to ensure smooth technical implementation.

3d Artist, Eon Reality MAY 2017 - APR 2019

- **Enterprise Solutions:** Delivered interactive VR/AR environments for global enterprise clients, focusing on procedural training, data visualisation, and manufacturing simulations.
- **Multi-Platform Deployment:** Optimised complex scenes for deployment across Oculus Rift, HTC Vive, and mobile platforms, working within both commercial and proprietary in-house engines.
- **Asset Lifecycle:** Responsible for the end-to-end creation of real-time assets, ensuring all content met strict technical requirements for diverse hardware specifications.

Trainee 3D Artist / Junior Developer, EON Reality DEC 2015 - MAY 2017

- Fast-tracked to a full-time professional role following intensive VR Innovation Academy training.
- Built foundational expertise in real-time interaction, 3D asset pipelines, and engine integration for industrial VR applications.

[EDUCATION]

VR Innovation Academy, EON Reality SEPT 2015 - DEC 2015

Ba Hons Game Design, Futureworks SEPT 2011 - JUNE 2014

[SIDE PROJECTS]

- **Audio Production & Composition:** Released ambient music albums; multi-instrumentalist with a focus on sound design and mastering for immersive atmospheres.
- **3D Printing:** Exploring physical output constraints, manifold geometry, and mesh optimisation for hardware-ready models.
