PROFILE

I'm a recent graduate Animator with an MA in 3D computer animation, as well as a BSc in Computer Games Development. I have experience with Autodesk Maya and Blender, creating character animation or layout environment animation works within those software, as well as integrating animation into game engines. Having an Understanding of weight, timing, and Performance. Experience working to provide feedback within team-based production environments.

PROJECTS / EXPERIENCE

2026 Showreel

Maya, Blender, UE5

09/2024 - 01/2026

Final Year Project

UE5, Maya, Blender

09/2024 - 05/2025

- Created character-driven cinematic animations using Maya, focusing on body mechanics, posing, timing, and performance clarity.
- Worked through blocking → spline → polish, refining motion and resolving animation issues through iteration.
- Collaborated with peers on layout and camera staging to support emotional storytelling and shot continuity.
- Integrated animations into Unreal Engine, ensuring readability and performance in real-time environments.

The Hunt

Unreal Engine, Gaea, Maya

09/2024 - 03/2026

- Supported cinematic storytelling through environment layout, staging, and mood-driven composition.
- Collaborated with teammates to align animation, environment, and lighting for cohesive scenes.
- Worked within real-time constraints, refining scenes for clarity and performance.

Showreel 2026

Unreal Engine, Blender

11/2023

- Produced cinematic shots with a focus on acting, staging, and camera movement.
- Maintained visual consistency by following established styles and responding to creative direction.
- Iterated on animation based on feedback, prioritising polish and narrative intent.

EDUCATION

The University of Arts London

09/2014 - 03/2026

Degree (MA), Majors (3D Computer Animation)

, London, LCC campus

- Exploring CG production pipelines, lighting and rendering, and post-production integration in Maya, Unreal Engine, and Blender.
- Working with industry-standard workflows to understand how creative and technical departments collaborate within a production environment.
- Building a broad skillset that bridges artistic storytelling and technical execution.

The University of Westminster

09/2019 - 08/2023

Degree (BSc), Majors (Computer Game Development)

, London, Cavendish Campus

- Creating game assets and components using 3 different modelling software (Maya, 3Ds Max and Blender)
- Game design/programming languages using 2 different game Engines (Unity/Unreal Engine)
- Collaborated with Splash Damage Studios and built a game mechanic with 10 prototypes and 3 iterations, resulting in positive feedback from the studio.
- Understanding software development life cycle and practising Testing (Unit, functional, Integration)

WORK EXPERIENCE

Tester / Sales Assistant - Cex

10/2023

- Tested and evaluated hardware and software systems, developing a strong eye for quality control and issue identification.
- Communicated technical issues clearly and worked collaboratively under time constraints.
- Demonstrated reliability, organisation, and adaptability within a fast-paced environment.

SOFTWARE SKILLS

3D Software: Maya | Blender | Unreal Engine | Gaea

Rendering & Lighting: Arnold | Unreal Lumen | Lighting & Composition

Compositing & Finishing: DaVinci Resolve |

Programming: C++ | C# | Python

Other Tools: Quixel Bridge | Git
